SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	03/07/2007	PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

<b>Office Action Summary</b>	<b>Application No.</b> 09/845,953	<b>Applicant(s)</b> LILES ET AL.	
	<b>Examiner</b> Michael J. Yigdall	<b>Art Unit</b> 2192	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 12 December 2006.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 1-3, 6-12, 15-21 and 24-28 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-3, 6-12, 15-21 and 24-28 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

### **DETAILED ACTION**

1. This Office action is responsive to Applicant's submission filed on December 12, 2006.

Claims 1-3, 6-12, 15-21 and 24-28 are now pending.

### ***Response to Arguments***

2. Applicant's arguments (remarks, pages 7-8) have been considered but are moot in view of the new ground(s) of rejection, as set forth below with reference to Jenevein. Applicant's amendment necessitated the new ground(s) of rejection.

3. Applicant again makes general statements that neither Fontanesi nor van Gilluwe "discloses or even suggests the desirability of combining the references in such a manner as to teach the embodiments recited in the independent claims" and that neither reference "provides any incentive or motivation for the combination" (remarks, page 8).

Applicant again conjectures, "In the present case it is clear that the Examiner's combination arises solely from hindsight based on the invention without any showing, suggestion, incentive or motivation in either reference for the combination as applied to the independent claims" (remarks, page 9).

However, again, Applicant fails to support these statements with any analysis of the examiner's reasoning or any evidence of nonobviousness. Applicant's statements are not persuasive arguments.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2192

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-3, 6-12, 15-21 and 24-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,681,323 to Fontanesi et al. (art of record, "Fontanesi") in view of U.S. Patent No. 6,351,850 to van GILLUWE et al. (art of record, "van GILLUWE") and in view of U.S. Patent No. 6,615,365 to JENEVEIN et al. (now made of record, "JENEVEIN").

With respect to claim 1 (currently amended), Fontanesi discloses a method performed by a computer system (see, for example, the abstract) comprising:

(a) configuring a memory to store a control process (see, for example, column 4, lines 24-34, which shows configuring a memory of an installation server with programs and procedures to control installation, i.e. a control process).

Fontanesi discloses determining the size of a storage device (see, for example, column 6, lines 51-55) and storing an image file on the storage device (see, for example, column 7, lines 5-25), but does not expressly disclose:

(b) in response to a size of a storage device and a size of an image to be stored on the storage device, identifying a sector offset on the storage device such that storage of the image on the storage device at the sector offset will result in the image being stored at or near a highest address of the storage device.

However, Fontanesi further discloses partitioning the storage device (see, for example, column 6, lines 42-58), formatting the storage device (see, for example, column 6, line 59 to column 7, line 4), and storing and installing an image file on the storage device (see, for

Art Unit: 2192

example, column 7, lines 5-25), among other operations. Inherently, Fontanesi must identify a location on the storage device with which to perform each of these operations. For example, Fontanesi cannot store an image file on the storage device, as disclosed, without first identifying a location at which to store the image file. Likewise, Fontanesi cannot partition the storage device, as disclosed, without first identifying a location at which to do so. Thus, Fontanesi inherently teaches identifying a location on the storage device.

Although the identified location on the storage device is not expressly a sector offset, van Gilluwe discloses identifying the number of sectors and the number and location of each partition on a storage device (see, for example, column 6, lines 17-34). The sectors are numbered based on a reference point (see, for example, column 2, lines 12-15), which is to say that the sector numbers are offsets from the reference point. Van Gilluwe further discloses that the sector numbers, or in other words, the sector offsets, identify unique locations on the storage device (see, for example, column 2, lines 15-25).

Moreover, van Gilluwe expressly discloses determining the size of each partition and the amount of free space in each partition when identifying the location of a partition (see, for example, column 6, lines 17-34). Thus, van Gilluwe teaches identifying a sector offset of a partition in response to a size of the storage device, such as the size of each partition. Indeed, it may be the case that there are no existing partition boundaries on the storage device (see, for example, column 6, lines 17-34). In such cases, van Gilluwe discloses performing the necessary partitioning actions on the storage device, such as adding and creating a new partition (see, for example, column 8, lines 6-14).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to supplement the system of Fontanesi with the features taught by van Gilluwe, so that the location at which to store an image file and the location at which to partition the storage device, for example, can be identified based on the characteristics of the storage device.

Fontanesi and van Gilluwe are both directed to the installation of an operating system (see, for example, the abstracts). To that end, van Gilluwe further discloses identifying the size of the operating system to be installed on the storage device (see, for example, column 6, lines 35-42). Accordingly, the combination of Fontanesi and van Gilluwe is also desirable because identifying the characteristics of the storage device and the size of the operating system to be installed on the storage device enables one to determine whether it is even possible to install the operating system on the storage device (see, for example, van Gilluwe, column 6, lines 42-49).

Therefore, Fontanesi in view of van Gilluwe teaches or suggests, in response to a size of a storage device and a size of an image to be stored on the storage device, identifying a sector offset on the storage device.

Although Fontanesi in view of van Gilluwe is silent as to whether the sector offset is identified such that the image is stored at or near a highest address of the storage device, Jenevein discloses storing an image on a storage device, preferably at the end of a partition (i.e., at or near the highest address of the partition) so that the image is easier to find in the event the storage device crashes (see, for example, column 14, lines 8-27).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to supplement the system of Fontanesi and van Gilluwe with the features taught by

Art Unit: 2192

Jenevein, such that the image is stored at or near a highest address of the storage device, and thus easier to find in the event the storage device crashes.

Therefore, Fontanesi in view of van Gilluwe and in view of Jenevein teaches or suggests, in response to a size of a storage device and a size of an image to be stored on the storage device, identifying a sector offset on the storage device such that storage of the image on the storage device at the sector offset will result in the image being stored at or near a highest address of the storage device.

Fontanesi in view of van Gilluwe and in view of Jenevein further discloses:

(c) determining the sector offset by the control process prior to an operating system being installed on the computer system and prior to the storage device being partitioned (see, for example, Fontanesi, column 5, lines 20-24, which shows that an operating system is not yet installed on the computer system, and column 6, lines 42-58, which shows that the characteristics of the storage device are determined prior to partitioning the storage device);

(d) storing the image onto the storage device at the sector offset by copying the image from the memory to the storage device (see, for example, Fontanesi, column 7, lines 5-25, which shows copying and storing an image file onto the storage device from the memory of the installation server, and column 4, lines 1-23, which further shows that the image includes an operating system).

Note that as presented above, Fontanesi cannot store an image file on the storage device without first identifying a location at which to store the image file. Thus, Fontanesi inherently teaches identifying a location on the storage device, and subsequently storing an image onto the

Art Unit: 2192

storage device at the identified location. In view of van Gilluwe, the location is identified in terms of a sector offset.

(e) providing the sector offset to an installation engine (see, for example, Fontanesi, column 5, lines 25-38, which shows a boot storage medium for installing the operating system, i.e. an installation engine).

Again, the location on the storage device, identified in terms of a sector offset, is inherently provided to the installation engine so that it can operate.

(f) subsequent to storing the image on the storage device, initiating the installation engine to cause the operating system to be installed on the storage device using the image (see, for example, Fontanesi, column 7, lines 5-25, which shows installing and configuring the operating system from the image file subsequent to copying and storing the image onto the storage device).

With respect to claim 2 (original), Fontanesi in view of van Gilluwe and in view of Jenevein further discloses, subsequent to initiating the installation engine, partitioning the storage device (see, for example, Fontanesi, column 5, lines 39-50, which shows initiating the installation engine, and column 6, lines 42-58, which shows subsequently partitioning the storage device).

With respect to claim 3 (original), Fontanesi in view of van Gilluwe and in view of Jenevein further discloses, subsequent to initiating the installation engine, performing a formatting operation on the storage device (see, for example, Fontanesi, column 5, lines 39-50, which shows initiating the installation engine, and column 6, line 59 to column 7, line 4, which shows subsequently formatting the storage device).

With respect to claim 6 (original), Fontanesi in view of van Gilluwe and in view of Jenevein further discloses providing the sector offset to the installation engine by storing the sector offset in a predetermined location on the storage device (see, for example, van Gilluwe, column 6, lines 17-34, which shows that the characteristics of the storage device are stored on the storage device, i.e. at a predetermined location, and Fontanesi, column 5, lines 53-61, which further shows storing a value at a predetermined location on the storage device).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the location or the sector offset to the installation engine by storing it in a predetermined location on the storage device, so that the sector offset can be maintained even in the event of a reboot (see, for example, Fontanesi, column 5, lines 53-61) or a power failure (see, for example, van Gilluwe, column 8, lines 21-32).

With respect to claim 7 (original), although Fontanesi discloses program logic, i.e. procedures and functions, for installing the operating system on the storage device (see, for example, column 5, lines 39-50), Fontanesi in view of van Gilluwe and in view of Jenevein does not expressly disclose providing the sector offset to the installation engine by passing the sector offset as part of a function call to initiate the installation engine.

However, passing a parameter as part of a function call is notoriously well known in the art. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the location or sector offset to the installation engine by passing it as part of a function call, as is known in the art.

With respect to claim 8 (original), Fontanesi in view of van Gilluwe and in view of Jenevein further discloses storing the image onto the storage device by copying the image from a CD-ROM (see, for example, Fontanesi, column 7, line 66 to column 8, line 11, which shows transferring the image file from a CD-ROM).

With respect to claim 9 (original), Fontanesi in view of van Gilluwe further discloses storing the image onto the storage device by copying the image over a network (see, for example, Fontanesi, column 7, line 66 to column 8, line 11, which shows transferring the image file from the installation server over a LAN).

With respect to claim 10 (currently amended) and claims 11, 12 and 15-18 (original), the claims recite a computer program product that corresponds to the method recited in claims 1-3 and 6-9, respectively (see the rejections of claims 1-3 and 6-9 above). Note that Fontanesi further discloses a computer program product comprising a computer program processable by a computer system and an apparatus from which the computer program is accessible by the computer system (see, for example, column 5, lines 25-50 and column 8, lines 12-15).

With respect to claim 19 (currently amended) and claims 20, 21 and 24-27 (original), the claims recite a system that corresponds to the method recited in claims 1-3 and 6-9, respectively (see the rejections of claims 1-3 and 5-9 above). Note that Fontanesi further discloses a system comprising a computer system (see, for example, FIG. 1).

With respect to claim 28 (currently amended), the limitations recited in the claim are analogous to those of claims 1, 3, 6 and 9 (see the rejections of claims 1, 3, 6 and 9 above).

*Conclusion*

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael J. Yigdall whose telephone number is (571) 272-3707. The examiner can normally be reached on Monday through Friday from 7:30am to 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tuan Q. Dam can be reached on (571) 272-3695. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
